Dear Nokukhanya,

Thank you for your email. For some reason, your original message did not reach me as intended. I only received a blank email with your details, and nothing else. I've now had a chance to go through your message's content since the message was attached to this email.

For your interest, I have included a Google Earth map, just to highlight the affected area. I think this will provide more clarity as to where the Valley TSF will be located. As illustrated, the Valley TSF is located between three other facilities (area marked in purple and pink). I think this should help to better understand the footprint of the project. Please let me know if the pipeline will be affected and if you need any other information in this regard.

Subject: FW: Project 1566

Good afternoon Nokukhanya,

Your email below and the attachment refers. After receiving the attached map, myself and Mr. Maduna visited the site again. We inspected the site of the proposed tailings dam. According to our assessment, the bigger part of the proposed tailings dam is behind the two existing mine tailings dams, with a narrow portion extending towards our pipeline, but situated between the two existing mine tailings dams as indicated on the attached map.

We measured the distance from the closest point of the proposed tailings dam to our existing pipeline and found it to be approximately 800m. We think that the proposed tailings dam is far enough not to affect our pipeline.

Furthermore, we propose that the consultants provide us with designs and specifications of the proposed tailings dam, which should clarify acid water seepage effect on our pipeline for the worst-case scenario. These are required since our existing pipeline lies approximately 150m from one of the existing tailings dam in the vicinity. Acid water from that tailings dam has affected our pipeline in a way that is corroded and leaks from time to time.

As an affected party (I&AP), please request that we be listed in their affected stake holder register and be notified of any developments and valuable information.

Kind Regards

Good day

As discussed telephonically I am Nokukhanya from Bloem Water. You sent a notification to the former Sedibeng water that is now Bloem Water regarding the proposed project 1566. Bloem water would like seek clarity on the exact location of the proposed tailing dam, this is because we have an existing bulk water pipeline in the vicinity. We have been on site but would like someone on your side to confirm the exact position of the proposed dams. Please advise on your availability to be on site and we can plan accordingly.

Regards

Dear Nokukhanya,

Thank you for your email. For some reason, your original message did not reach me as intended. I only received a blank email with your details, and nothing else. I've now had a chance to go through your message's content since the message was attached to this email.

For your interest, I have included a Google Earth map, just to highlight the affected area. I think this will provide more clarity as to where the Valley TSF will be located. As illustrated, the Valley TSF is located between three other facilities (area marked in purple and pink). I think this should help to better understand the footprint of the project. Please let me know if the pipeline will be affected and if you need any other information in this regard.

Subject: FW: Project 1566

Good afternoon Nokukhanya,

Your email below and the attachment refers. After receiving the attached map, myself and Mr. Maduna visited the site again. We inspected the site of the proposed tailings dam. According to our assessment, the bigger part of the proposed tailings dam is behind the two existing mine tailings dams, with a narrow portion extending towards our pipeline, but situated between the two existing mine tailings dams as indicated on the attached map.

We measured the distance from the closest point of the proposed tailings dam to our existing pipeline and found it to be approximately 800m. We think that the proposed tailings dam is far enough not to affect our pipeline.

Furthermore, we propose that the consultants provide us with designs and specifications of the proposed tailings dam, which should clarify acid water seepage effect on our pipeline for the worst-case scenario. These are required since our existing pipeline lies approximately 150m from one of the existing tailings dam in the vicinity. Acid water from that tailings dam has affected our pipeline in a way that is corroded and leaks from time to time.

As an affected party (I&AP), please request that we be listed in their affected stake holder register and be notified of any developments and valuable information.

Kind Regards

Good day

As discussed telephonically I am Nokukhanya from Bloem Water. You sent a notification to the former Sedibeng water that is now Bloem Water regarding the proposed project 1566. Bloem water would like seek clarity on the exact location of the proposed tailing dam, this is because we have an existing bulk water pipeline in the vicinity. We have been on site but would like someone on your side to confirm the exact position of the proposed dams. Please advise on your availability to be on site and we can plan accordingly.

Regards

Dear Nokukhanya,

Thank you for your email. For some reason, your original message did not reach me as intended. I only received a blank email with your details, and nothing else. I've now had a chance to go through your message's content since the message was attached to this email.

For your interest, I have included a Google Earth map, just to highlight the affected area. I think this will provide more clarity as to where the Valley TSF will be located. As illustrated, the Valley TSF is located between three other facilities (area marked in purple and pink). I think this should help to better understand the footprint of the project. Please let me know if the pipeline will be affected and if you need any other information in this regard.

KIND REGARDS

Hi Sir,

Could you please forward me a map which demarcates the shooting range? I'd like to forward it, together with the letter to my project manager.

KIND REGARDS
LUCIEN JAMES

Attachments: Shooting Range map.jpg

Dear sir,

Thank you for the information provide. I've included an additional map which highlights the TSF footprint in pink and purple. I've also added a pin on the area where the shooting range is located, as per Harmony.

I've relayed your information to Harmony who will be able to assist if you have any further concerns. In terms of this project, the proposed activities will not interfere with the continued operation of the shooting range.
